

Clinic Overview & Revenue Analytics

- Tracked 192 total patients and managed overall clinic performance.
- Analyzed demographic split showing 103 Male and 89 Female patients.
- Used an Area Chart to visualize revenue growth trends over time.

Doctor Performance & KPI Rating

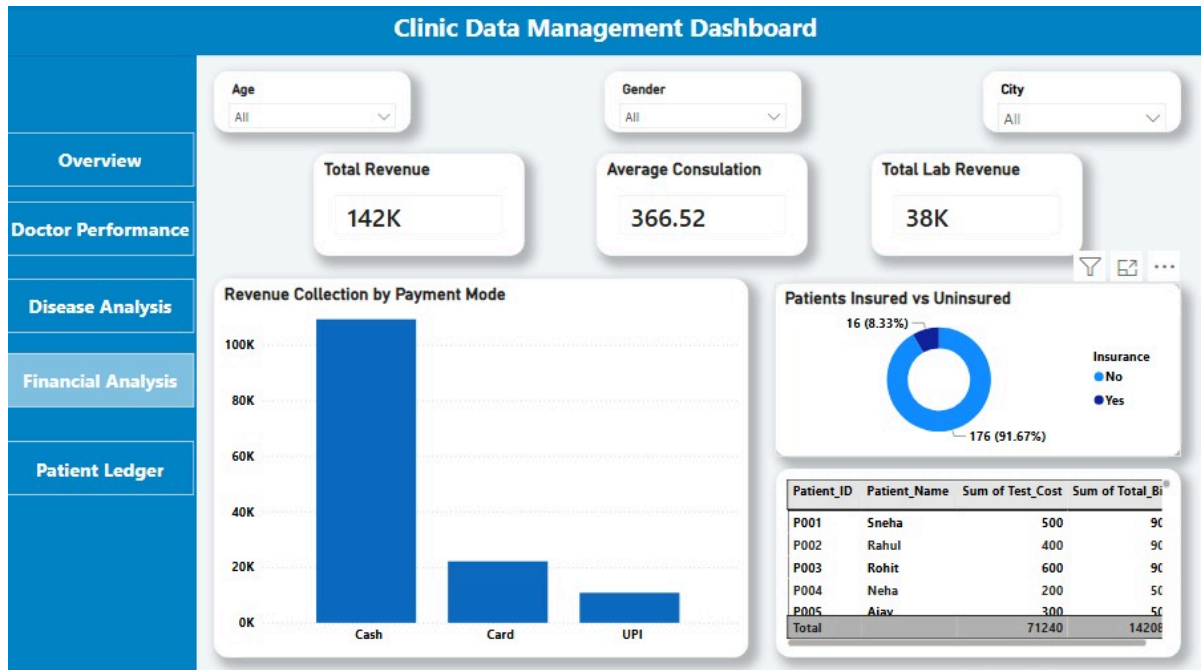

- Monitored total consultations across 6 specialized doctors to balance patient load.
- Tracked average doctor performance rating at 4.15/5 to maintain healthcare service quality.
- Identified top-performing doctors based on patient volume influx using a Clustered Bar Chart.

Patient Disease & Blood Group Profiling

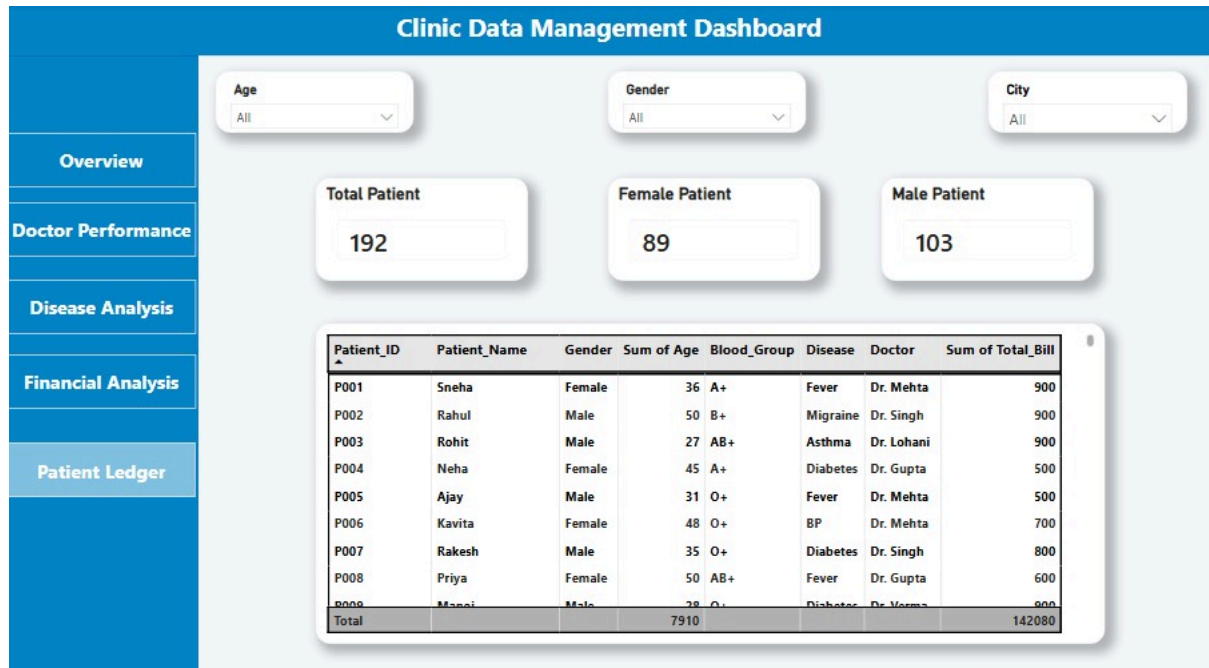

- Analyzed medical metrics for major conditions like Fever, Migraine, and Asthma.
- Mapped patient volume by blood groups (A+, O+, AB+) using a Donut Chart for critical insights.
- Combined patient counts with medical expenditure to evaluate healthcare treatment

Financial Metrics & Payment Mode Analysis

- Evaluated revenue collection channels, highlighting Cash as the dominant payment mode over UPI/Cards.
- Monitored the ratio of Insured vs. Uninsured patients to assess clinic billing risks.
- Tracked total billing distribution to streamline financial and revenue operations.

Patient Master Ledger

- Designed a 100% full-width tabular ledger for end-users to audit detailed patient records line-by-line.
- Integrated multi-column data points including Patient ID, Age, Disease, Assigned Doctor, and Billing (Sum of Total_Bill).
- Provided interactive dropdown slicers for real-time patient history filtering.
